

Advice after Intravitreal Injection

Please use the eye drops and/or ointment as advised.

Following your treatment you may experience the following:

- Your eye/s may feel sore for a few days following your treatment
- Painkillers e.g. Paracetamol will help with the soreness
- Your eye/s may feel gritty this will normally go away after a week
- The white area of your eye/s, where the injection was given may be red/bloodshot, the eye will return to being white after a few days.

You may have spots/ 'floaters' in your vision

These are normal and will settle with time.

If you experience any of the following please contact the eye department immediately:

- Painful red eye (not relieved by painkillers)
- Sticky eye and pus like discharge
- Sudden/significant worsening of vision
- A veil or curtain coming into your vision.

Your vision may be blurred for a few days but if your eyesight is significantly worse, please contact the numbers below.

If you experience any chest pain or you feel very unwell please go to the Accident & Emergency department.
